

End User Computing Redesign Workshop

This is a four-day workshop for customers who have an existing VDI environment or wish to take their current VDI environment to the next level.

End User Computing Workshop: Client Benefits

- Collaborative, interactive workshop with your own IT team and stakeholders, in your own environment
- Review new technologies in the areas of end user computing that provide better benefits and reduce cost of VDI
- Mitigate risk and strategy stall by leveraging GreenPages' experienced engineers and architects
- High level budgetary estimates to address challenges you are facing with your deployed infrastructure
- Review technologies in persona management and automation that provide further VDI agility
- Next step high-level approach to implement the agreed upon recommendations

Why GreenPages End User Computing Redesign Workshop?

GreenPages developed this workshop as a standalone engagement at a reasonable price to help client decision makers evaluate the overall cost, ROI, time, and strategy direction necessary to implement and support a comprehensive end user computing initiative within their organization.

GreenPages is the technology equivalent of the Navy Seals, the Green Berets and Special Forces all rolled into one. —CRN

Workshop: Services & Strategy

Day 1: Discovery & Analysis—Onsite at Client Location

- Meet with internal stakeholders to discuss business goals and technical requirements
- Review problems, challenges and pain points within the existing environment
 - Application delivery & virtualization
 - Persona management challenges
- Client workshops to discover possible benefits in workforce productivity
- Explore other possible end user scenarios requiring application delivery
- Discuss client devices and additional access methods
- Operational gap review discussing lifecycle maintenance, performance, end user experience, support, and provisioning methods
- Gather high level data related to existing infrastructure and applications

Day 2: Solutions Workshop—Onsite at Client Location

- Review findings from Day 1 with internal stakeholders
- Technology roadmap presentation reviewing the current state of end user computing and how it applies to your business
 - Discuss new technologies and how they may improve the environment
- Technical review of existing infrastructure: broker, compute, storage and networking
 - Gaps as they exist in performance or delivery
- Discuss server memory and core sizing recommendations
- Conduct whiteboard sessions to diagram potential solutions based on gathered information
- Discuss solutions along with pros/cons of each specific to the client's unique environment
- Discuss budgetary estimate to implement changes

Workshop Deliverable: End User Computing Redesign Strategy

- Business and technical requirements for improving the existing end user computing strategy redesign
- List of recommendations based on findings discussed during the workshop
- Estimated resource changes for compute and storage platforms
- Conceptual end user computing design architecture including the recommended changes
- Recommendations for next steps, such as upgrades, capacity expansions, and configuration changes
- Budgetary estimates for recommended design changes

Scope & Pricing

- \$9900
